## Musa LED

Wall lamp made of aluminum. The LED light source is completely invisible and despite the small size emits a beam of light toward the ceiling and floor. Thanks to its compact size increases the possibilities of positioning of the lamp, from the large environments to the reduced ones. The clean and elegant appearance allows the insertion of the lamp in very different places, starting from the aseptic and neutral up to the more aesthetically elaborate. Available in satin white, anthracite anodised aluminum and bicolor versions.
